DETAILED ACTION

Election/Restriction

1. Applicant's argument that both aperture lengths may be found in the same embodiment is persuasive as evidenced in the presence of both lengths in apertures of applicant's and Merriweather's dispensing slot and they are not mutually exclusive. Accordingly, the election of species requirement presented by examiner Schlack is withdrawn.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10 drawn to an adapter plate for retrofitting a dispensing cabinet, classified in class 221, subclass 36.
 - II. Claims 11-20 drawn to a dispenser for dispensing C-fold towels, classified in class 221 subclass 48.
3. Inventions I, and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utilities such as a fluent product flow restrictor plate, and dividing sheets of stacked paper, modifying dispensing cabinets, and as See MPEP § 806.05(d). In the instant case, invention II has separate utility such as storing towels.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
5. No claims appear to be linking claims.
